Notice of Construction Work

October 12, 2021

The Massapequa Water District (MWD) will be replacing the water main in your area beginning on or about the week of October 18th, 2021. The project consists of excavating the roadways and placing the new water main underground. The water main will be installed on the following roads: Roosevelt between Walnut and Spruce. This section of water main is being replaced due to the amount of water main breaks over the years and after an investigation of the present condition of the water main.

The project is expected to last approximately 2 weeks. During construction residents will be inconvenienced for a very short period of time. The water will need to be turned off for a short time on a couple days. The contractor is required to notify you prior to turning the water off with some advanced notice. It will be necessary for the contractor to store the new water main along the route (in front of some of your homes in the roadway) prior to installation. After the water main is installed all of the service lines to your homes will be connected to the new main. The pavement will be restored in a temporary manner with final restoration being coordinated with the Village. The contractor will be responsible to maintain a safe and smooth road surface during this time

Please understand this project is part of the Board of Commissioners' commitment to invest and improve the district's infrastructure to help ensure a safe water supply for future generations. If you have any questions or if issues arise during the project please feel free to call me at the above number.

Thank you for your understanding.

Stan Carey, Superintendent

*Committed to deliver and preserve our water supply for the welfare, health and safety
of the inhabitants of the Massapequa Water District.*
